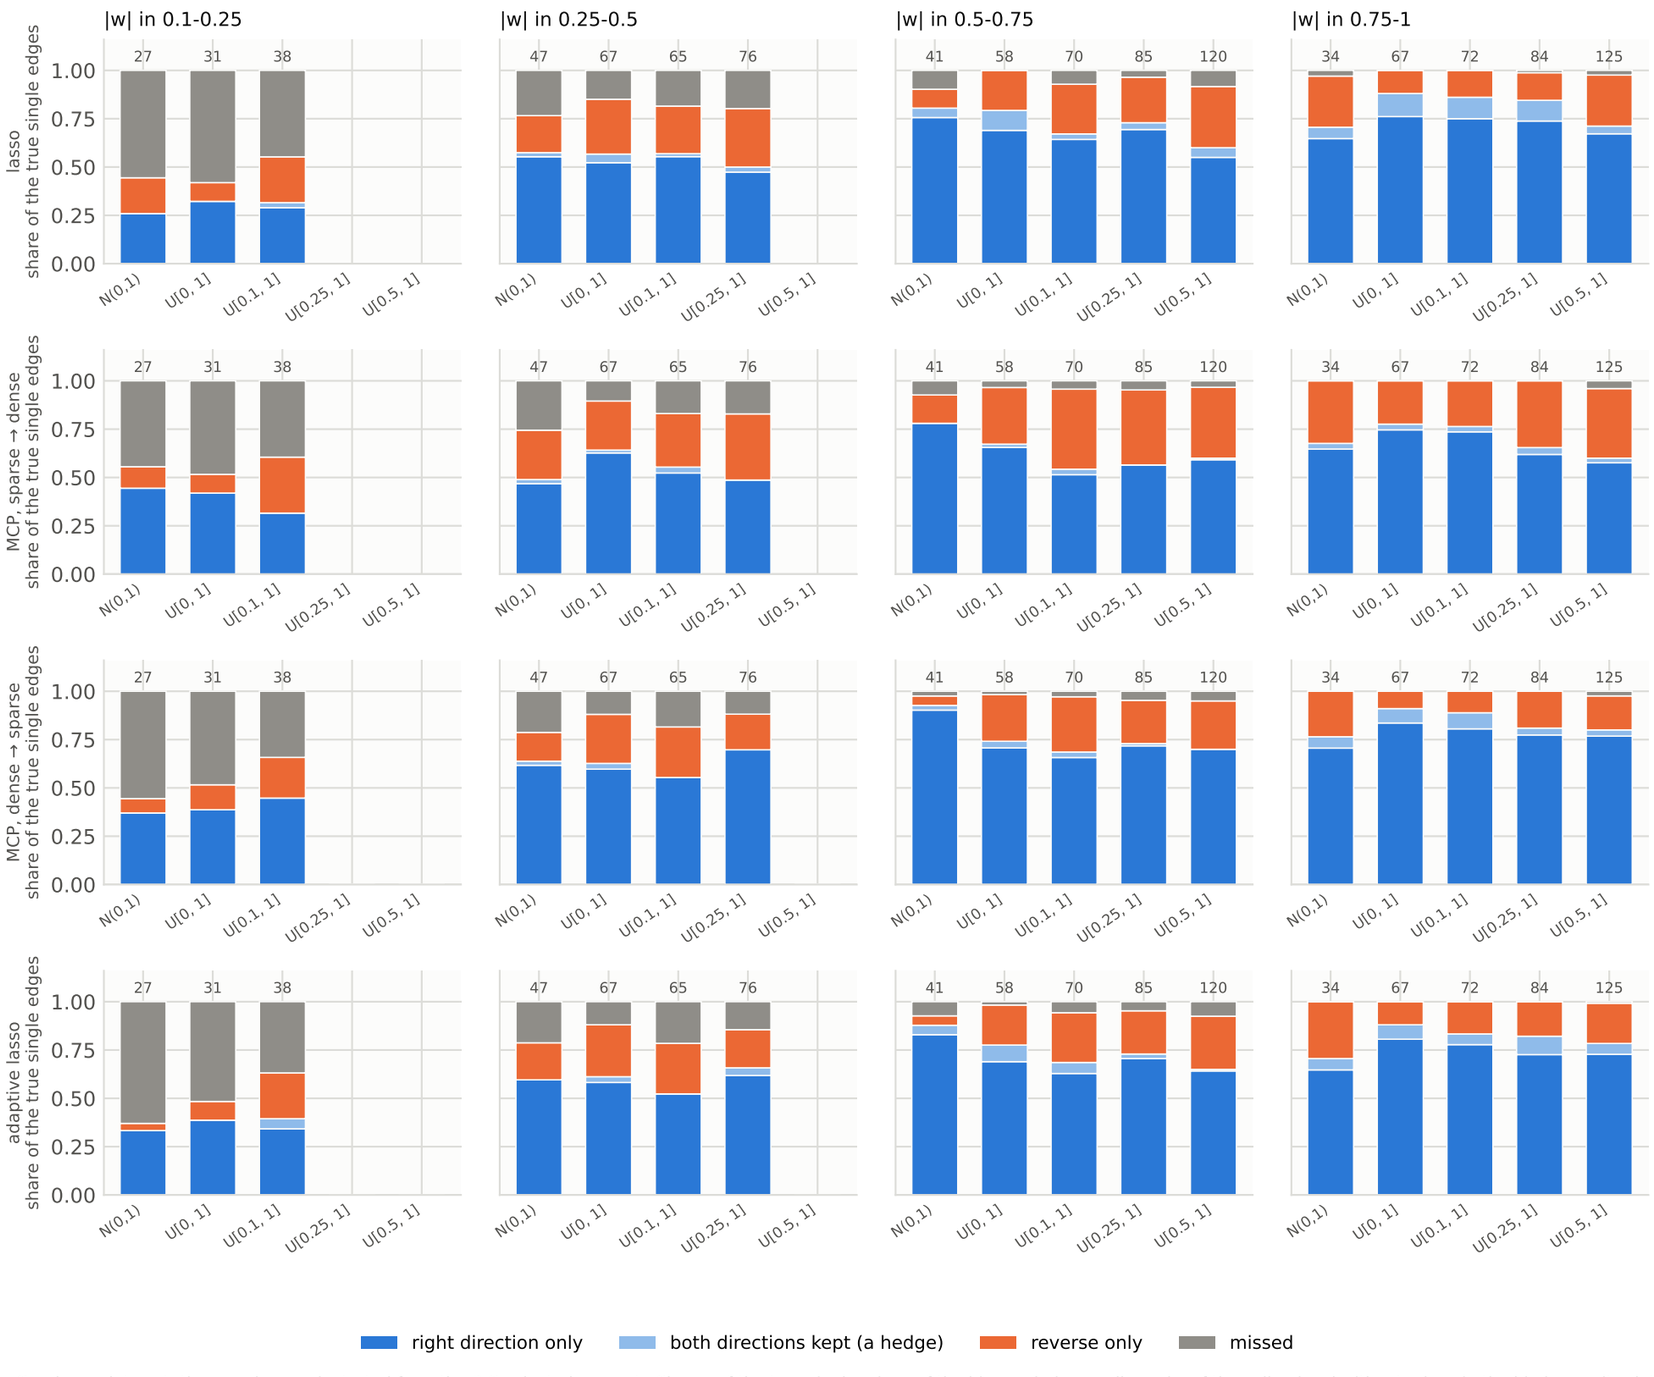
E3: the weight distribution as a knob, direct loss -- the same weight bin across the levels -- |w| on the generator's scale, the true single edges in the search from the BIC selection; p = 10, rescaled C, n = 10^4 (numbers: edges in the bin)
[laptop rehearsal: p = 10, true C = 2I, 4 replicates, 16 graphs per cell]



Graph per data set: the greedy search started from the BIC-selected support. Shares of the true single edges of the bin, pooled over all graphs of the cell; a level without edges in the bin leaves its slot empty.
