E3, direct loss: the same weight bin across the laws -- standardised |w|, the true single edges in the graph after the search; p = 10, rescaled C, n = 10^4 (numbers: edges in the bin)
[laptop rehearsal: p = 10, true C = 2I, 4 replicates, 16 graphs per cell]

Graph per data set: the greedy search started from the selected support. Shares of the true single edges of the bin, pooled over all graphs of the cell; a law without edges in the bin leaves its slot empty.
