E3: the weight distribution as a knob, direct loss -- the true single edges in the search from the BIC selection by weight within each level -- |w| on the generator's scale; p = 10, rescaled C, n = 10^4 (numbers: edges in the bin)
[laptop rehearsal: p = 10, true C = 2I, 4 replicates, 16 graphs per cell]

Graph per data set: the greedy search started from the BIC-selected support. Shares of the true single edges of the bin, pooled over all graphs of the cell (half-open bins on |w|); the number above a bar is the edge count behind it.
